The Globalstar Ericsson R290 Dual-Mode satellite phone effectively meets the needs of people whose specific demands have not yet been met by mobile phones. The R290 allows for greater user mobility while staying in touch.

The R290 is currently the smallest, lightest, dual-mode satellite/GSM phone in the world for global usage. This is very important, as the R290 will often be carried in environments where every gram saved could make a major difference.

The R290 is a dual-mode satellite/GSM 900 mobile phone that can be set to switch to satellite mode when beyond the range of normal GSM 900 coverage. Once Globalstar network has been fully deployed, the R290 will afford almost full global coverage.

The R290 satellite phone has a built-in modem for data and fax communication, which means that it is always ready for use. The modem allows for transmissions at up to 9.6 kbps in both satellite and GSM 900 mode.

"Voice & Data Anytime, Anywhere"

Advantages:

- Compatibility with existing GSM 900 cellular networks
- Globalstar mode when you're not within cellular coverage areas
- Superior digital voice quality in both Globalstar and GSM 900 modes
- Reliable service virtually anywhere in the world
